Problem Definition/Problem Statement - Food Waste

Edible food lost or discarded across the supply chain (farm to fork) due to spoilage, overproduction, or plate leftovers.

Root Cause of the Problem

The root of the food waste problem is a combination of inefficient industrial supply chains, consumer over-purchasing and systems, cultural attitudes that treat food as cheap and disposable.

By wasting resources, driving up food prices (disproportionately hitting low-income families), and diverting food from hungry people

Impact & Equity

Our 3 step plan for change is reduce reuse, and to recycle.

Our 3-Step Plan for Change

We need to have leaders to be able to help out group mates. Corporate executives in retail/food service (restaurants, grocery), federal officials (USDA, EPA, FDA), local municipal leaders, and waste management operations.

Who are Decision Makers We Need to Reach

How we will measure our success

Direct measurement

Proposed solution

Refuse, reduce, reuse, repair, recycle, and compost.

Problem statement

List at least three credible resources that support your

Lanfills, organic waste, open burning

Planning meals, and proper food storage  
(using the FIFO - first-in, first-out method)  
and using freezers to extend product  
life.

What help we need to be successful
